ULMUS PUMILA, CHINESE ELM. This elm is creating unusual interest among nurserymen, horticulturists and foresters. It is more resistant to attacks of insects and disease than many of the native elms. It is known to have given good results as far north as North Dakota and Canada, and as far south as Texas. It makes an unusually rapid growth and does well in dry soil. Seeds will arrive here in July and orders received now will be filled as soon as it comes to hand.50	4.00
